

Totally-new design 1/10th scale EP Formula model debuts!

The stylish model containing precise details of the full-sized car accelerates the revival of the formula car boom.

The new Formula Ten kit was developed as a realistically scaled car which everyone can drive easily. The Formula Ten is a direct-drive RC model featuring reinforced chassis, 3 bevel gear differential and O-ring-supported T bar rear suspension. On top of the overall dimensions, the front 3D wing, verge board and other aerodynamic parts are all so realistic that you can also enjoy the Formula Ten as a display model.

Realistic 3D front wing

Verge board with smooth curve

The realistic rear wing with all of the fantastic shapes and curves of the real cars

Adjustable car height with spacer

FRP upper deck to reduce pitching and stabilize drive performance

Friction damper
FRP T-bar features high traction. Roll amount can be adjusted by tightening the screw.

Battery folder to accept 4-cell or 6-cell battery pack

Reliable and easy-to-build 3 bevel gear differentials do not require frequent maintenance or fine-tuning (48 pitch spur gear & pinion 75T/17T included).

Stylish chassis layout to accept the realistic Formula Ten body

DIMENSIONS:
Length: 436mm
Width: F 176mm R 180mm
Wheelbase: 283mm
Weight: 1050g
Drive system: Direct drive 2WD
Camber: F 2° R 0°
Caster: F 6° R 0°
