

The breathtaking Baja 5B SS – the Baja, squared!

The 1/5th scale Baja 5B RWD desert racing buggy has been a huge success with RC fans, racers and journalists, and Baja owners have been extremely happy with the racing prowess, durability and qualities of the Baja 5B. Now, HPI is proud to announce the Baja SS, a full-option Baja kit that you assemble yourself, loaded with tons of hop-ups that enhance the speed and power of the Baja 5B buggy, improve its durability even further, and provide totally sweet custom looks!

The Baja SS follows the HPI innovation of upgraded 'Super Sport' models that feature kit versions of popular HPI RTR models, with additional option parts added to enhance the enjoyment of your kit. A long list of option parts is included with the SS version of the Baja 5B. As you build the kit, you add in the options that come in the box, and add your own radio gear (receiver, throttleservo, and receiver battery).

At the heart of the Baja SS is the #15403 Fuelie 26S 26cc engine, a tougher, stronger and more powerful engine than the standard 23cc Fuelie engine in the Baja 5B RTR buggy. With more displacement you get increased low-end grunt, more acceleration and huge top-end speed! The Fuelie 26S is a 2-stroke engine powered by regular pump petrol that is mixed with 2-stroke engine oil, so the running cost of the engine is extremely low when compared to any normal nitromethane-powered glow engine. You'll spend just pennies per tank on fuel!

To handle the extra horsepower of the Fuelie 26S, the drivetrain of the Baja SS is boosted with specially designed option parts that can handle the power increase. Providing a boost of extra power is the #86690 Aluminium Tuned Pipe, which is designed just for the 26cc engine and gives even more power to the Baja SS. The #15448 8000 RPM Clutch lets the engine rev up to a high RPM before engaging the drivetrain, giving you lightning-fast acceleration off the starting line and out of every corner. Protecting the differential is the #87568 Aluminium Alloy Diff Case, giving protection from the extreme strength of the engine. Finally, the #86610 Heavy Duty Rear Dogbones get the power from the diff to the rear wheels with chunky steel driveshafts and jointed rubber boots for minimal loss of power.

The Baja SS carries over the robust, efficient and highly detailed double-wishbone suspension from the standard Baja 5B, giving you amazing control and precision over any type of terrain. The suspension doesn't just look like the real deal, it's built to last! The rugged upper and lower arms will soak up the bumps and rough landings of fast off-road driving and racing, plus it's super-strong to hold up in those inevitable crashes and rollovers!

In addition to all the heavy duty options included with the kit, you get a tough, super-strong steering servo that is already equipped with the #80584 Metal Gear Steering upgrade. This allows you to have the security of reliable, quick steering in all conditions. With a powerful servo controlling the steering, the Baja SS will track straight and true when you want it to, no matter how bumpy the running surface it. The front wheels will also stay pointed in the right direction as you power through the turns! This is a great standard feature of the Baja SS, putting you well on your way to a solid electronics package.

To protect the tyre sidewalls the kit also includes #3272 Heavy Duty Bead Locks in the Baja silver. The Heavy Duty Bead Locks feature a wide rim that extend further over the sidewall of the rear tyres to protect the tyres in all conditions, and especially as the Baja slides through corners and across rough ground. They are a great way to extend the life of the tyres, and are available in a variety of colours to enable you to match any custom color scheme!

Baja 5B SS Super Sport

Baja 5B SS Super Sport

PRE-INCLUDED HOP-UPS

Orange Anodized SS Pa

From the shock caps to the engine plate and chassis braces, you can see lightweight anodized aircraft aluminium 6061 T6 parts that highlight the incomparable looks of the Baja SS chassis.

Fuelie 26S 26cc Engine

You'll get more power, increased torque and more speed than 23cc engine. Extra horsepower gives you the grunt to get over and through anything in your way!

8000 RPM Clutch

Launches the Baja 5B at higher RPM for more punch off the line and out of low-speed corners.

Aluminium Tuned Pipe

Tuned for increased power and quicker acceleration. The kit also includes the stock muffler for quieter operation.

Metal Gear Steering

Tough metal gears for extra durability and reliable steering in all conditions and at all speeds.

Heavy Duty Beadlocks

Reinforced design increases durability of the wheels and tyres. Protects the sidewalls of your tyres in hard cornering manoeuvres.

Front & Rear Sway Bars

Improves handling and gives quicker steering response.

New Rear Shock Tower Br

Relocates shocks for increased rear suspension travel for better traction and braking on rough ground.

VVC/HD Pro Shock

New design VVC/HD shocks for improved handling over rough terrain. Large diameter shock shafts for increased durability.

Heavy Duty Rear Dogbo

Metal construction for extra durability with high horsepower engines like the Fuelie 26S. Features rubber boots at both ends to keep dirt and rocks out of the joints.

Aluminium Alloy Diff C

For increased drivetrain durability and extended time between maintenance and rebuilds. Perfect for the high output 26S Engine!

#7560 & #7562 Clear Pre-Cut Bodysh

Crystal clear tough polycarbonate is ready for custom paint. Pre-cut to make painting and installation quick and easy. Also comes with pre-cut vinyl decals and protective overspray film.
